DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-7 and 25-29, drawn to a polypeptide comprising a soluble CD39 polypeptide and a composition thereof, classified in class 530, subclass 350, and class 514, subclass 8.
- II. Claims 8-24, drawn to a nucleic acid, a vector, and a cell comprising said nucleic acid, and a method of expressing said nucleic acid classified in class 435, subclasses 69.1, 320.1 and 325, and class 536, subclass 23.1.
- III. Claim 30, drawn to a method of inhibiting angiogenesis comprising administering a soluble CD39 polypeptide, classified in class 424, subclass 192.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (M.P.E.P. § 806.05(h)). In the instant case, the product as claimed, the soluble CD 39, can be used in a materially different process such as immunopurification or immunodetection procedures, as well as in a method of inhibiting angiogenesis.

Groups I and II are unique products. The inhibitors differ with respect to their composition (amino acid versus nucleic acid) and accordingly differ with respect to structure and biochemical /physicochemical properties, and are therefore patentably distinct.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, and because a search in the non-patent literature of any of these distinct inventions would not be co-extensive with a search of the others, an examination and search of two or more inventions in a single application would constitute a serious undue burden on the Examiner, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the

Art Unit: 1644

application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
